I am	I'm trying to	But	Because	Which makes me feel
Employee	Trying to collect employees data sets	But I'am unable to collect data sets	Because of insufficient employees due to lack of knowledge or skills	To be improved in employement services and also improving in employees knowledge.
Employee	Analyse the data sets	improper data sets	Should'nt provide proper information in the data sets	To collect and maintanence the proper data sets.
Employee	To maintain the data sets and trying to understand the employees details	I can't implement data sets	Impossible to give effective implementation	Sought out the problems and done the implemention successively.
Employee	Trying to implement the process according to the data sets	I can't perform opertions like visulzations,dash boards creating etc....	So that we can't perform the operations randomly	If all the problems are rectified, It is easier to do the operations like visulaizing,creating dashborads etc....
